

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously Presented) A tension mask assembly, comprising:
a tension mask having electron beam through holes;
at least one sub-frame for tensioning the tension mask; and
main frames welded to the tension mask, wherein each of the main frames is bent
at a middle portion in a width direction, and has a portion perpendicular to the tension mask
defining a partition and another portion opposite to the tension mask defining a lower plane,
and wherein widths of a middle portion and of both ends of the lower plane are formed in the
range of the following equation:

$$0 < \frac{w_1 - w_2}{w_2} \leq 1.0,$$

where w_1 is the width of the middle portion, and w_2 is the width of both ends.

2. (Previously Presented) A tension mask assembly, comprising:
a tension mask having electron beam through holes;
at least one sub-frame for tensioning the tension mask; and

main frames welded to the tension mask, wherein each of the main frames has a partition perpendicular to the tension mask, a lower plane perpendicularly bent from the partition with a certain width to be opposed to the tension mask, and a support bent from the lower plane to support the partition at the outer edge, and wherein widths of a middle portion and of both ends of the lower plane are formed in the range of the following equation:

$$0 < \frac{y_1 - y_2}{y_2} \leq 1.0,$$

where y_1 is the width of the middle portion, and y_2 is the width of both ends.

3. (Previously Presented) The tension mask assembly according to claim 2, wherein widths of a middle portion and both ends of the support are formed in the range of the following equation:

$$0 < \frac{d_1 - d_2}{d_2} \leq 1.0,$$

where d_1 is the width of the middle portion, and d_2 is the width of both ends.

4. (Previously Presented) The tension mask assembly according to claim 1, wherein the electron beam through holes are shaped as a slot or grill.

5. (Previously Presented) The tension mask assembly according to claim 1, wherein the main frames are welded to the at least one subframe.

6. (Previously Presented) The tension mask assembly according to claim 1, wherein a shape of the lower plane is one of curved, rounded, rectangular, triangular, or any combination thereof.

7. (Previously Presented) A cathode ray tube containing the tension mask assembly of claim 1.

8. (Previously Presented) The tension mask assembly according to claim 2, wherein the electron beam through holes are shaped as a slot or grill.

9. (Previously Presented) The tension mask assembly according to claim 2, wherein the main frames are welded to the at least one subframe.

10. (Previously Presented) The tension mask assembly according to claim 2, wherein a shape of the lower plane is one of curved, rounded, rectangular, triangular, or any combination thereof.

11. (Previously Presented) A cathode ray tube containing the tension mask assembly of claim 2.

12. (Previously Presented) A tension mask assembly, comprising:
a tension mask having electron beam through holes disposed therein;
at least one sub-frame configured to support the tension mask under tension;

and

main frames attached to the tension mask, wherein each of the main frames includes a first portion extending perpendicular to the tension mask and a second portion extending perpendicular to the first portion defining a lower plane, and wherein a width of a middle portion of the lower plane is greater than a width of edge portions of the lower plane, the width of the edge portions being greater than zero.

13. (Previously Presented) The tension mask assembly according to claim 12, wherein a shape of the lower plane is one of curved, rounded, rectangular, triangular, or any combination thereof.

14. (Previously Presented) The tension mask assembly according to claim 22, wherein the at least one subframe is welded to the lower plane of the main frame.

15. (Previously Presented) The tension mask assembly according to claim 12, wherein each of the main frames further comprises a third portion bent from the lower plane and configured to support the first portion, such that the main frame has a triangular cross section.

16. (Previously Presented) The tension mask assembly according to claim 12, wherein a width of a middle portion of the third portion is greater than a width of the edge portions of the third portion.

17. (Previously Presented) A cathode ray tube containing the tension mask assembly of claim 12.

18. (Previously Presented) The tension mask assembly according to claim 12, wherein the widths of the middle portion and edge portions of the second portion of the main frames satisfy the following equation:

$$0 < \frac{w_1 - w_2}{w_2} \leq \text{a first prescribed value}$$

where w_1 is the width of the middle portion and w_2 is the width of the edge portions.

19. (Previously Presented) The tension mask assembly according to claim 18, wherein the first prescribed value equals 1.0.

20. (Previously Presented) The tension mask assembly according to claim 12, wherein the widths of the middle portion and edge portions of the third portion of the main frames satisfy the following equation:

$$0 < \frac{d_1 - d_2}{d_2} \leq \text{a second prescribed value}$$

where d_1 is the width of the middle portion and d_2 is the width of the edge portions.

21. (Previously Presented) The tension mask assembly according to claim 20, wherein the second prescribed value equals 1.0.

22. (Previously Added) The tension mask assembly according to claim 12, wherein the at least one subframe is attached to the lower plane of the main frame.

23. (Previously Added) The tension mask assembly according to claim 22, wherein the at least one subframe is attached to a bottom surface of the lower plane of the main frame.
